PROFESSIONAL SUMMARY

Final-year Computer Science student concentrating in Data Science, with internship experience spanning EMS operations, IT service systems, and data workflows at Xcel Energy and Janus Henderson Investors. Proficient in Python, SQL, and machine learning, with additional experience building full-stack applications using React and Firebase. Strong foundation in statistical modeling, data analysis, and software development, seeking a data-driven or software engineering role to apply these skills.

EDUCATION

COLORADO SCHOOL OF MINES

Golden, CO

Bachelor in Computer Science, Concentration in Data Science

Expected Graduation Dec 2026

- Relevant Coursework Completed: Advanced Software Engineering, Advanced Data Science, Database Management, Statistical Modeling, Algorithms, Artificial Intelligence, Machine Learning, Coding with AI
- Clubs: Nepalese Student Association, South Asian Student Association

TECHNICAL SKILLS

- **Languages:** Python, SQL, HTML/CSS, Java, C/C++, R
- **Frameworks & Libraries:** React, pandas, scikit-learn, NumPy, Matplotlib
- **Tools & Platforms:** Firebase, Git/GitHub, ServiceNow, Microsoft Excel, Databricks, Power BI
- **Concepts:** Machine Learning, Statistical Modeling, AI

CERTIFICATIONS

- Databricks for Data Analysts — LinkedIn Learning
- Google AI Essentials — Google/Coursera

PROFESSIONAL EXPERIENCE

XCEL ENERGY

Golden, CO

Technical Intern

May 2025 - Present

- Processed ServiceNow tickets to provision secure EMS view-only user accounts and manage access permissions
- Maintained internal compliance web content by editing server-hosted HTML files and resolving deployment and file accessibility issues
- Executed recurring data synchronization workflows by extracting operational substation data from EATS across PSCo's transmission network and preparing datasets in Microsoft Excel
- Supported EMS operations through system troubleshooting and developed foundational knowledge of SCADA, transmission networks, and utility control systems

JANUS HENDERSON INVESTORS

Denver, CO

Infrastructure Client Services Intern

Jun 2024 - Aug 2024

- Created visualizations regarding lender equipment and used the Automated Testing Framework within ServiceNow
- Researched and analyzed trailing 12 months tickets for the Global Service Desk to identify equipment and software with most frequent issues
- Collaborated with team members to design and enforce standards around the ticketing resolution system
- Conducted testing and debugging activities on the ServiceNow platform, ensuring the quality and reliability of forms within the IT Service Portal

UPS STORE

Lakewood, CO

Sales Associate

Nov 2021 - Jan 2023

- Worked directly with customers to determine their shipping and packaging needs
- Helped customers with returning their Amazon purchases
- Packaged fragile items and sorted customer mail

RELEVANT PROJECTS

DISTILLERY TRADING PLATFORM

Capstone Project

- Developed a functioning business-to-business e-commerce platform within 5 weeks, allowing licensed distilleries to securely trade products through a centralized marketplace
- Designed and implemented responsive user interfaces using React, including product browsing, inventory management, shopping cart, user accounts, and messaging pages
- Integrated Firebase Authentication and Cloud Firestore to provide secure user authentication and real-time storage and retrieval of user profiles, product listings, orders, and conversations
- Built a real-time messaging system allowing distilleries to communicate directly during transactions while maintaining persistent conversation history
- Optimized database queries and React state management to minimize load times and ensure responsive performance across application pages
- Collaborated in an Agile team with three others using Git and GitHub for version control, feature branching, code reviews, and merge conflict resolution

ENGLISH PREMIER LEAGUE SCORE PREDICTION

Advanced Data Science Final Project

- Developed a predictive machine learning model to forecast English Premier League match scores from historical team performance data
- Cleaned and transformed a large sports analytics dataset (9,380 rows, 22 columns spanning 2000–2025) through preprocessing, feature engineering, standardization, and dimensionality reduction
- Applied statistical analysis and machine learning techniques, comparing Linear Regression and Neural Network models (R^2 of 0.572 and 0.548, respectively) to identify key factors influencing match outcomes
- Utilized Python data science libraries including pandas, scikit-learn, NumPy, and Matplotlib for analysis and model development
